1 Introduction

This document describes the Implementation Guide ISO 20022 Account Statement camt.053.001.02 in Handelsbanken.

The purpose of this Message Implementation Guide is to provide guidance of how information is structured in the exchange between Handelsbanken and the customer.

Camt.053 is also available as an account statement with extended information of the transactions.

Handelsbanken's message set-up complies with the international definitions for content and use of an ISO 20022 "BankToCustomerStatement" message and Common Global Implementation (CGI).

1.1 Related documents

The documents below contain information to facilitate the implementation of the in the ISO 20022 camt.053.001.02 format;

- The ISO 20022 Message Definition Report (MDR), Message Usage Guideline (MUG) and XML Schema can be downloaded from: www.iso20022.org/full_catalogue.page

1.2 History

New releases of the Implementation Guides are published on a regular basis, based on new versions of the underlying standards or to provide clarification or changes. At Handelsbanken, changes to version numbers are made according to the following guidelines. The original version is 1.0.0.

- The last digit is changed when the format descriptions are changed, for example text clarifications and examples.
- The second digit is changed if minor changes are made to the format such as new countries or changes in the payment type.
- The first digit is changed (thus becoming a completely new version) if the format changes mean that the customer will have to make adaptations in order to continue using the service. In this case, all customers affected are informed of the new version and what the changes involve.

2 General rules

The Account Statement (camt.053) message is sent by Handelsbanken to an account owner or to a party authorized by the account owner to receive the message. The message account statement reports opening and closing balance and all booked transactions.

The account statement is available for accounts with Handelsbanken in the following countries:

Great Britain	Sweden
Luxembourg	USA
Netherlands	Other banks, based on SWIFT 940
Norway	

2.1 Restrictions to the service

In this version of camt.053 Transaction details and Remittance information are specified and presented if available and possible to identify. All details available of the transactions are always presented in AdditionalEntryInformation <AddtINtryInf> and AdditionalTransactionInformation <AddtITxInf>. No specified transaction details are available for local payments booked in a lump sum. The extended version of camt.053 (camt.053XS) includes all details of the transactions presented as transaction details and remittance information.

There are some country specific limitations regarding the reference information available in camt.053. The details of the transactions shown is either limited or not shown at all for some Nordic countries, depending on transaction type and country, se below.

2.1.1 NORWAY

- No specified transaction details are available for local payments booked in a lump sum.
- Limited transaction details and remittance information are presented for cross border payments.

2.1.2 SWEDEN

- No specified transaction details are available for local payments booked in a lump sum.
- Transaction details and remittance information are not presented for cross border payments.

3 Terms and concepts

3.1 Abbreviations

These abbreviations are frequently used and are important for the understanding of the message.

Term	Description
BBAN	Basic Bank Account Number – identifier used nationally by financial institutions, i.e.in individual countries, generally as part of a National Account.
IBAN	International Bank Account Number – identifier used nationally and internationally by financial institutions. An IBAN consists of a country code, a control digit, a bank identifier and a national account number. A Swedish IBAN is made up of 24 characters in total and a foreign IBAN can be up to 34 characters.
SWIFT	SWIFT is the abbreviation of Society for Worldwide Interbank Financial Telecommunication and is a communications network used by most of the banks in the world for sending each other payment instructions and messages.
BIC	Business Identifier Code is made up of 8 or 11 characters. A unique address linked to SWIFT.

3.2 References

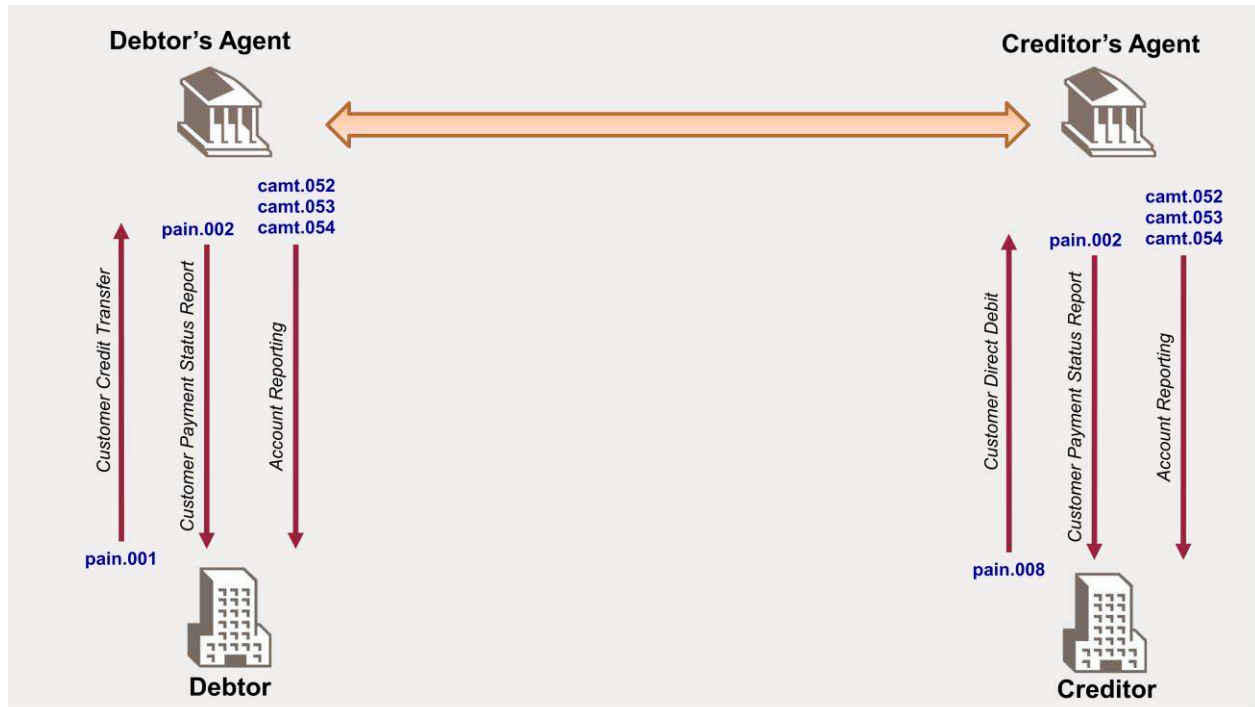

The Account Statement has the following possible references on the different levels in the message.

Reference type	Message position and tag name	Description
<GrpHdr>		
Message Id	<GrpHdr><MsgId>	Unique identification of the message.
<Stmnt>		
Identification	<Stmnt><Id>	Unique identification of the statement
ElectronicSequence Nubmer	<Stmnt><ElctmcSeqNb>	Sequential number of the statement
<Ntry>		
Entry Reference	<Ntry><NtryRef>	Unique reference per entry within one statement.
Account Servicer Reference	<Ntry><AcctSvcrRef>	Unique reference as assigned by the account servicing institution to unambiguously identify the entry.
<NtryDtls>		
Proprietary/reference	<NtryDtls><TxDtls>	Information related to the underlying transaction. Stated by Handelsbanken
Additional Transaction Information	<NtryDtls><TxDtls><AddtlTxInf>	Supplementary details related to the transaction/entry.
Additional Entry Information	<NtryDtls><TxDtls><NtryInf>	Details related to the entry.

4 Scenario

The purpose of this section is to basically describe the entire chain of electronic information exchange between the Debtor, the Debtor's Agent, the Creditor's Agent and the Creditor.

Please note that for all messages sent to the bank, the status of the message and the payment orders will be displayed in Handelsbanken online corporate banking service.

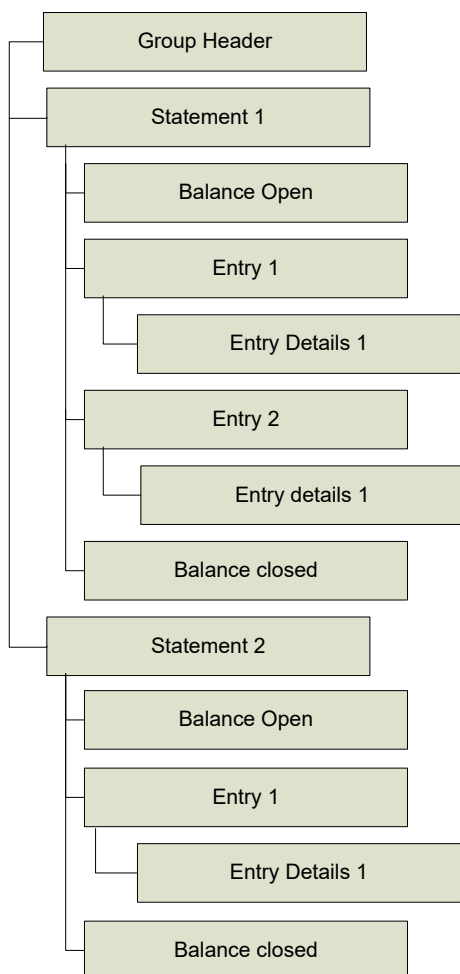

- 1) The Debtor sends a CreditTransferInitiation (pain.001) to the Debtor Agent.
- 2) The Debtor Agent validates the message and sends a PaymentStatusReport (pain.002) reporting if the file is accepted or rejected.
- 3) The information included in every single payment are validated against each payment system and the Debtor Agent sends a PaymentStatusReport (pain.002) reporting rejected payments to the Debtor.
- 4) The payments will be processed between Debtor Agent and Creditor Agent on the agreed execution date.
- 5) If any of the payment is rejected, the Debtor Agent sends a PaymentStatusReport (pain.002) reporting rejected payments to the Debtor.
- 6) Debtor Agent sends a Debit Notification report (camt.054) reporting executed payments to the Debtor
- 7) Creditor Agent sends a Credit Notification report (camt.054) reporting received payments to the Creditor.
- 8) Debtor Agent or Creditor Agent sends an Interim AccountReport (camt.052) to the Debtor or Creditor.
- 9) Debtor Agent or Creditor Agent sends an Account Statement (camt053) to the Debtor or Creditor.

5 Format specification

This section consists of a technical description of the message type Account Statement ISO 20022 camt.053.001.02.

5.1 Message structure

The camt.053 message is composed of the building blocks Group Header, Statement, Balance, Entry and Entry details.

GroupHeader

This building block is mandatory and present once. It contains elements such as MessageIdentification and CreationDateTime.

Statement

This building block is mandatory repetitive. It contains elements such as Account and FinancialInstitutionIdentification.

Balance

This building block is mandatory repetitive. It contains elements such as Opening booked balance, Closing booked balance and Closing available balance including Dates.

Entry

Entry is a part of Balance and can be repetitive. It contains information related to the entry in the account, such as Amount, Booking and ValueDate and BankTransactionCode.

EntryDetails

Entry Details a part of Entry and contains detailed information related to the entry. Please note that entry details often are limited or missing for the Nordic countries. See restrictions to the service above.

5.2 Implementation guidelines

The example below illustrates the structure of the format description. The order of the elements in the table follows the order of the elements in the schema. White rows are used for Message Items that can hold data and yellow rows are Message Items which are XML tags used for the data's structural position in the XML message.

The headings used in the format description are described in the table below.

ISO Index	Depth	Or	Message Item	XMLTag	Mult.	Status	Type
0.0	-		BankToCustomerStatement	<BkToCstmrStmt>			
1.0	+		GroupHeader	<GrpHdr>	[1..1]	M	
1.1	++		MessageIdentification	<MsgId>	[1..1]	M	Text
1.2	++		CreationDateTime	<CreDtTm>	[1..1]	M	DateTime
2.0	+		Statement	<Stmt>	[1..n]	M	

Heading	Description
ISO Index no	Reference number that points to the related field description in the ISO 20022 Message Definition Report (MDR).
Structural Sequence	Indication of the Message Items structural level in the message tree structure by the number of +-signs. Group Header <GrpHdr> and Payment Information <PmtInf> has one + as the two starting points in the message.
Message Item	A Message Item is a composing part of a Message. It can be a Message Element (which can be compared to the "fields" of a traditional message) or a Message Component (which can be compared to a block of information, consisting of different message elements).
Tag Name	A specific name assigned to a Message Item that will appear in the XML Schema and in XML instances that use this Message Item.
Multiplicity	Indicates whether a Message Item is optional, mandatory and/or repetitive due to ISO 20022 XML schema. Multiplicity is represented by a notation between square brackets as described below; [0..1] this element and all underlying elements in the tree (in the XML-schema) is optional and must be presented exactly once [0..n] this element this element is optional with unlimited repetition [1..1] this element is mandatory and must be present exactly once [1..n] this element is mandatory with unlimited repetition

Heading	Description
Status	<p>Indicates the data's status due to Handelsbanken.</p> <p>Optional(O) = optional to include the data in the message</p> <p>Mandatory(M) = the data will be required to ensure a correct process of the payment</p> <p>Conditional(C) = the data is required for certain payments or required dependent on other data in the message</p> <p>Exclusive or(XOR) = one of many data should be used, but not multiple</p> <p>Required(R)= the data is mandatory if an optional or conditional data is used</p>
Type	<p>A Type Representation is used to group similar Types, such as Codes, Dates, Text, Numeric etc. If Handelsbanken has restrictions in the number of characters that differs from the schema, it will be stated in this column.</p>
