The statement contains balance and transactions for all types of transactions booked on the account in Norway, Sweden, Great Britain, the Netherlands, Luxembourg, USA and accounts in other banks. Information can be delivered to the customer on file or via SWIFT network, for balancing against general ledger and for automatic reconciliation of accounts receivable and payable ledgers.

1.1 Definitions

Term	Description
IBAN	IBAN stands for International Bank Account Number and consists of a country code, a control digit, a bank identifier and a national account number. A Swedish IBAN is made up of 24 characters in total and a foreign IBAN can be up to 34 characters.
SWIFT	SWIFT is the abbreviation of Society for Worldwide Interbank Financial Telecommunication and is a communications network used by most of the banks in the world for sending each other payment instructions and messages.
BIC	Business Identifier Code, 8 or 11 characters. A unique address linked to SWIFT.

1.2 History

New releases of the Implementation Guides are published on a regular basis, based on new versions of the underlying standards or to provide clarification or changes. At Handelsbanken, changes to version numbers are made according to the following guidelines. The original version is 1.0.0.

- The last digit is changed when the format descriptions are changed, for example text clarifications and examples.
- The second digit is changed if minor changes are made to the format such as new countries or changes in the payment type.
- The first digit is changed (thus becoming a completely new version) if the format changes mean that the customer will have to make adaptations in order to continue using the service. In this case, all customers affected are informed of the new version and what the changes involve.
